

How to configure an L&S Lighting System

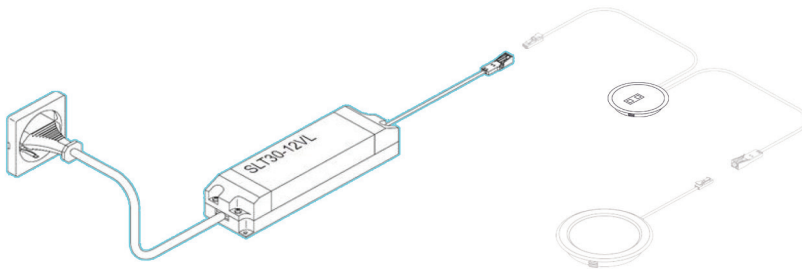

1 Select the appropriate Light Fixtures.

Add up the total wattage and choose the correct driver and switches. Our simple Plug & Play connectivity is extremely flexible and easy to use. The products are put together in a linear 1+2+3 system.

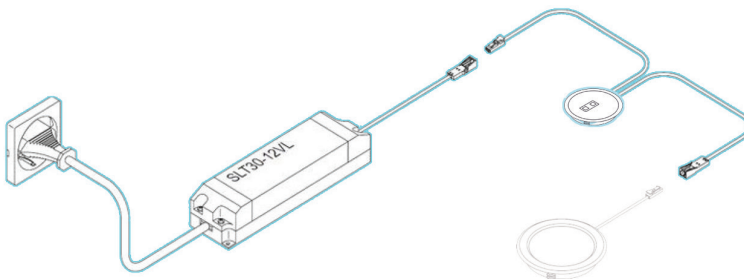

2 Choose your LED Driver.

Make sure the Driver's wattage rating is higher than the total wattage of all the light fixtures. Attach your Driver to electrical power. Make sure it is located in an accessible area.

3 Switches & Sensors:

If you are using a Switch or Sensor, it will plug into the Driver's Distribution Block. All L&S Lighting Fixtures and Accessories are Plug & Play, so no electrician is needed. Place the switch in an area that is centrally located and easy to use.

4 Install your lights!

Plug your lights into the Distribution Block on the Driver or Switch.
